AMENDMENTS TO THE CLAIMS

Please amend the claims as follows:

Claim 1 (Currently Amended): A method of image improvement in a virtual presence architecture (VPA) including a host computer in communication with a virtual presence server (VPS), a remote computer in communication with a virtual presence client (VPC), the method, on each new screen resolution that is received by a VPS, comprising:

~~a host computer in communication with a virtual presence server (VPS), a remote computer in communication with a virtual presence client (VPC), on each new screen resolution that is received by a VPS,~~

detecting at the VPS a new screen resolution of the host computer;

adjusting a screen border to correspond with the new screen resolution;

identifying whether the adjusted screen border is near an expected location; and

if no black border is found close to the expected border location, discarding the adjusted screen border and loading a predetermined set of values for the screen border instead.

Claim 2 (Original): The method of claim 1, wherein the predetermined set of values for the screen border is the Video Electronics Standards Association (VESA) set of standard values.

Claim 3 (Original): The method of claim 1, wherein the adjusting is performed by setting a capture engine to move the screen down and to the right.

Claim 4 (Currently Amended): The method of claim 1, wherein the user is prompted to manually adjust said plurality of borders of a the screen border to corresponding with the new screen resolution.
